| Scan lists                       | 28 |
| Roaming zones (DMR sites)        | 29 |

## Programmable buttons

Not programmable here: channel switch and POWER/VOL knobs (top), Menu, Exit, speaker, PTT.

| Key                  | Short press         | Long press      |
|----------------------|---------------------|-----------------|
| PF1 (side, upper)    | Scan                | Nuisance Delete |
| PF2 (side, lower)    | Digital Monitor     | LastCall Reply  |
| PF3 (top, emergency) | Power               | Roaming         |
| P1                   | Main Channel Switch | APRS Send       |
| P2                   | V/M                 | FM              |
| Up (front pad)       | Previous zone       |                 |
| Down (front pad)     | Next zone           |                 |

Long press = hold 1 second. Key lock: manual.

# What is programmed on this radio

2792 channels in 153 zones; 153 are receive only. Zones fall into these groups:

| Group                               | Zones | Channels | What it is                                                                                                                                                                                                        |
|-------------------------------------|-------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DMR repeater sites (NEDECN)         | 104   | 2127     | One zone per repeater site across New England, NY and RI. Each channel is a talkgroup on that repeater (CC and time slot set per site); network talkgroups include state-wide, regional, TAC, SKYWARN and Parrot. |
| Simplex                             | 1     | 9        | Amateur simplex calling and common simplex frequencies.                                                                                                                                                           |
| Analog repeaters by state           | 6     | 198      | FM repeaters (2 m, 70 cm and 1.25 m on the 578), filed by state and named CALL City. Tones are programmed.                                                                                                        |
| GMRS                                | 8     | 98       | GMRS simplex and repeater channels, shared and by state. A trailing * means the repeater tone is not publicly listed.                                                                                             |
| MURS                                | 1     | 5        | MURS channels 1-5.                                                                                                                                                                                                |
| Marine                              | 1     | 51       | Marine VHF channels.                                                                                                                                                                                              |
| Weather                             | 1     | 7        | NOAA weather radio, receive only.                                                                                                                                                                                 |
| ARES / EmComm (Maine)               | 5     | 161      | Maine ARES and Cumberland County EMA channels, state net and interoperability lists.                                                                                                                              |
| County EMA (Maine)                  | 15    | 67       | County emergency management frequencies, from the Maine FOG. Receive only.                                                                                                                                        |
| Federal / national interoperability | 1     | 63       | NIFOG national interoperability channels (VHF, UHF, 700/800 MHz). Government channels are receive only.                                                                                                           |
| Packet                              | 1     | 11       | Packet radio (APRS and node frequencies).                                                                                                                                                                         |
| Satellites                          | 9     | 46       | Amateur satellite downlink/uplink pairs (SO-50, ISS, AO-91, AO-123 and others), one zone each.                                                                                                                    |

Channel names: DMR channels are SITE then talkgroup (e.g. BRDCT CT SW); FM repeaters are CALL City. A zone holds up to 250 channels; a scan list is selected per channel.

## Using the radio

### *Moving between zones and channels*

Change zone: press Down on the front pad for the next zone, Up for the previous zone.

Change channel: turn the channel knob (top of the radio) within the current zone.

Switch the main channel between A and B: short press P1 (Main Channel Switch).

Receive-only channels (marked RX only) have PTT Prohibit on and will not transmit.

Key assignments on page 1 are from the CPS (Optional Setting -> Key Function).

### *Other keys*

**Digital Monitor** (PF2 short press): press once for single time slot (the slot of the active channel / talkgroup); press twice for double time slot, which lets you hear any talkgroup the repeater is transmitting; press again for off.

**Scan** (PF1 short press): Menu, Scan, then option 3 "Scan List", pick a list and select "Select Cur List". Scan lists hold analog channels only; for DMR, use Digital Monitor instead. **Nuisance Delete** (PF1 long press) drops a busy channel from the scan temporarily.

**Power** (PF3 short press) steps the power level: L low, M medium, H high, T turbo. **Roaming** (PF3 long press) searches for the strongest DMR repeater nearby.

**Before first use:** this codeplug carries the owner's callsign and DMR ID (KC1JMH, 3123446). Replace them in the CPS under Digital, Radio ID List, and set your callsign and SSID under Public, APRS, and the power-on text under Optional Setting.

## Zone list

| #  | Zone             | Ch | Page | #   | Zone             | Ch | Page |
|----|------------------|----|------|-----|------------------|----|------|
